

Grammar

P 90 B1.1

1. Oil should be used more carefully.
2. Energy must be saved!
3. Solar power and other renewable forms of energy should be promoted!
4. Every energy consumption must be reduced!
5. Nuclear energy should be made safer!
6. More Biogas could be used!
7. Wind turbines can be made more efficient!
8. New deposits of gas and oil can be found!

B2.1

At first the coal is transported to the coal-fired power plant by a ship. The coal is then stored near the power plant. Later the coal is burned and steam is produced. Then the steam is led through the turbines which drives turbine blades. This moves the magnets inside the generators. The electric energy is generated in the generators and is then sent into the power lines. The water can now be used again.
